SAFETY PRECAUTIONS

GENERAL GUIDE LINES

- 1. It is advisable to insert an isolation transformer in the a.c. supply before servicing a hot chassis.
- When servicing, observe the original lead dress in the high voltage circuits. If a short circuit is found, replace all parts that have been overheated or damaged by the short circuit.
- After servicing, see that all the protective devices such as insulation barriers, insulation papers, shields and isolation R-C combinations are correctly installed.
- When the receiver is not being used for a long period of time, unplug the power cord from the a.c. outlet.
- 5. Potentials as high as 33kV are present when this receiver is in operation. Operation of the receiver without the rear cover involves the danger of a shock hazard from the receiver power supply. Servicing should not be attempted by anyone who is not familiar with the precautions necessary when working on high voltage equipment. Always discharge the anode of the tube.
- After servicing make the following leakage current checks to prevent the customer from being exposed to shock hazard.

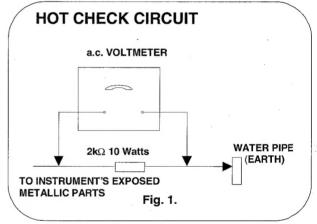

LEAKAGE CURRENT COLD CHECK

- Unplug the a.c. cord and connect a jumper between the two prongs of the plug.
- 2. Turn on the receiver's power switch.
- 3. Measure the resistance value with an ohmmeter, between the jumpered a.c. plug and each exposed metallic cabinet part on the receiver, such as screw heads, aerials, connectors, control shafts etc. When the exposed metallic part has a return path to the chassis, the reading should be between 4M ohm and 20M ohm. When the exposed metal does not have a return path to the chassis, the reading must be infinite.

LEAKAGE CURRENT HOT CHECK

- Plug the a.c. cord directly into the a.c. outlet. Do not use an isolation transformer for this check.
- Connect a 2kΩ 10W resistor in series with an exposed metallic part on the receiver and an earth, such as a water pipe.
- Use an a.c. voltmeter with high impedance to measure the potential across the resistor.

- Check each exposed metallic part and check the voltage at each point.
- Reverse the a.c. plug at the outlet and repeat each of the above measurements.
- 6. The potential at any point should not exceed 1,4V rms. In case a measurement is outside the limits specified, there is a possibility of a shock hazard, and the receiver should be repaired and rechecked before it is returned to the customer.

X-RADIATION WARNING

- The potential sources of X-Radiation in TV sets are the high voltage section and the picture tube.
- 2. When using a picture tube test jig for service, ensure that the jig is capable of handling 33kV without causing X-Radiation.

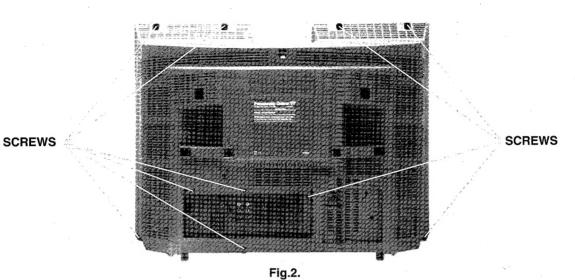

NOTE: It is important to use an accurate periodically calibrated high voltage meter.

- Set the brightness to minimum.
- Measure the high voltage. The meter should indicate.
 32kV ± 1kV.
 - If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.
- 3. To prevent any X-Radiation possibility, it is essential to use the specified tube.

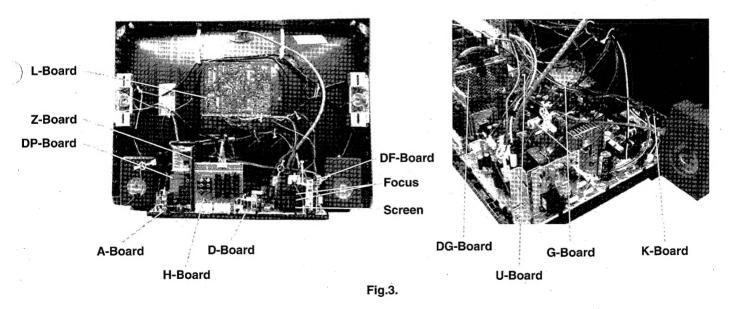

SERVICE HINTS

How to remove the rear cover

1. Remove the 10 screws as shown in Fig.2.

LOCATION OF CONTROLS

HOW TO MOVE THE CHASSIS INTO SERVICE POSITION

- 1. Remove the 3 screws (B) and (C) shown in Fig.5. / Fig.6., and remove the 2 speakers from the cabinet.
- 2. Affix the support strap supplied in the service pack (TZS1EK002) using a back cover screw, into the top right-hand cabinet rib (A) shown in Fig.4.
- 3. Hold and lift the rear of the chassis and gently pull toward you, as shown in Fig.4.
- 4. Release the respective wiring clips and rotate the chassis vertically through 90°, anti-clockwise.
- 5. Locate the base of the chassis frame into location (D), shown in Fig.7. / Fig.9.
- 6. Clip the chassis frame onto the support strap, shown in Fig.7. / Fig.8.
- 7. After servicing replace the speakers, and ensure all wiring is returned to it's original position before returning the receiver to the customer.

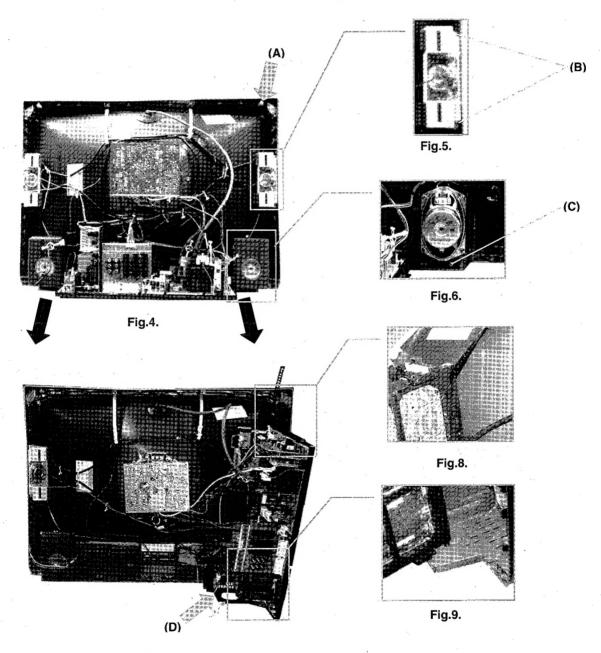

Fig.7.

SELF CHECK

Self-Check is used to automatically check the bus lines and hexadecimal code of the TV set.

To get into Self-Check mode press the down (-/v) button on the customer controls at the front of the TV set, at the same time pressing the **STATUS** button on the remote control, and the screen will show:
To exit Self-Check, switch off the TV set at the power button.

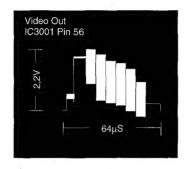

/ Factory use only

WAVEFORM PATTERN TABLE

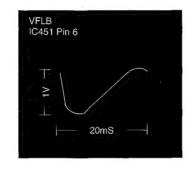

Note: All waveforms have been taken using a standard colour bar pattern.

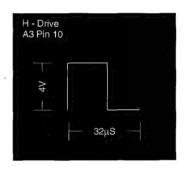

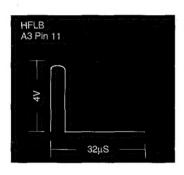

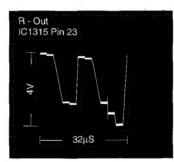

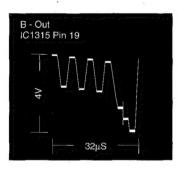

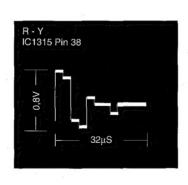

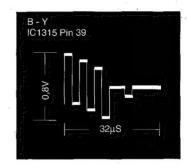

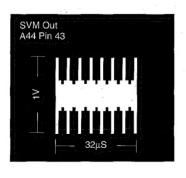

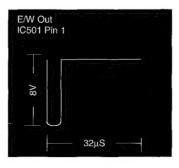

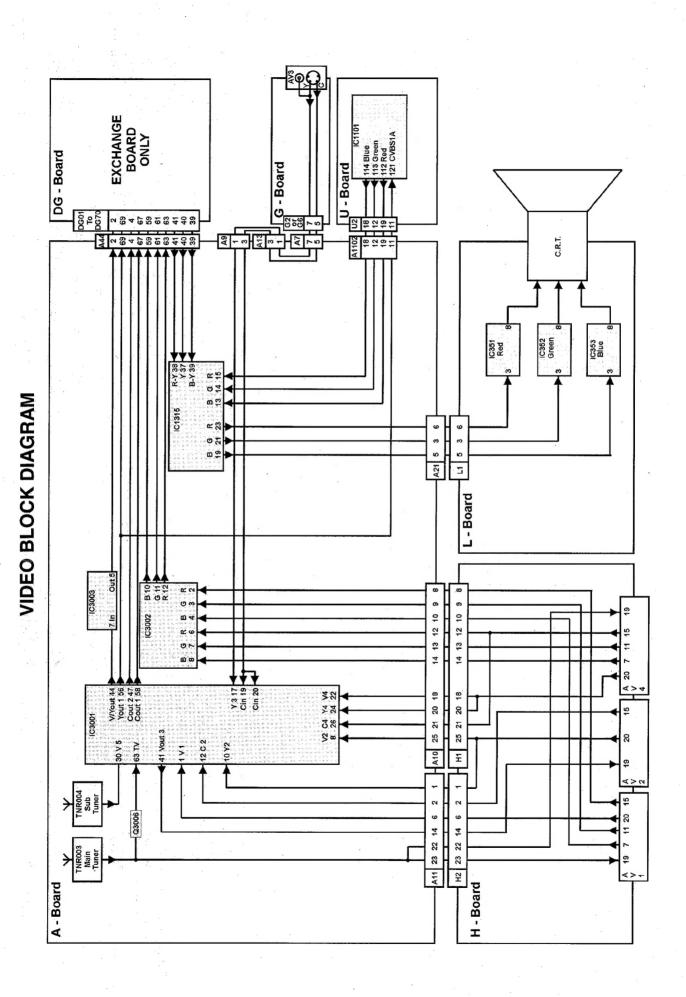

ALIGNMENT SETTINGS

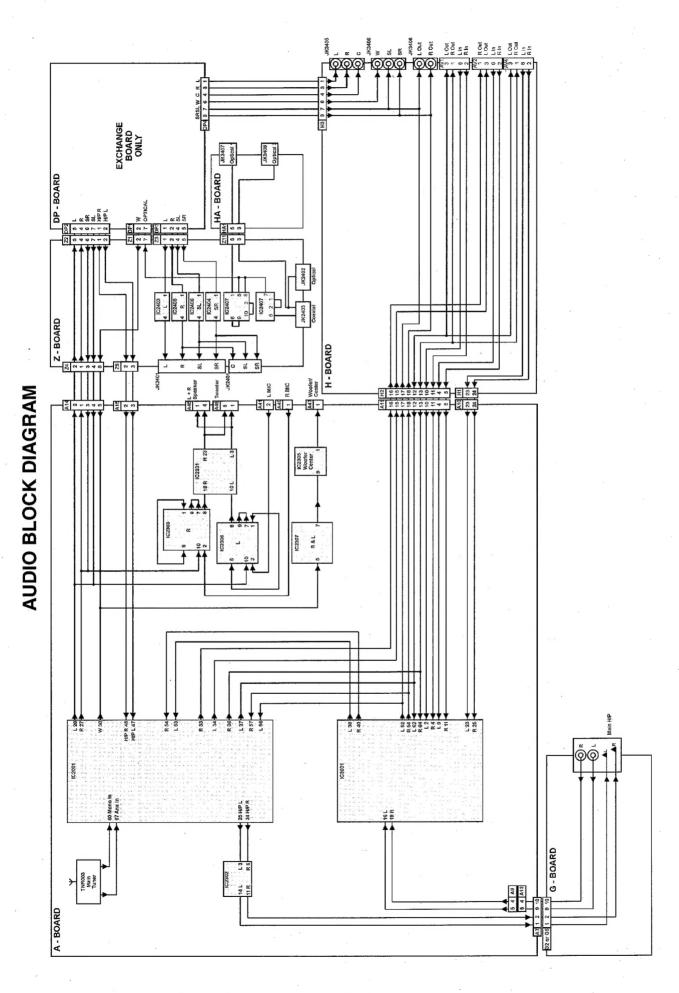

(The figures below are nominal and used for representative purposes only.)

- Set the Bass to maximum position, set the Treble to minimum position, press the down button (- / v) on the customer controls at the front of the TV and at the same time press the INDEX button on the remote control, this will place the TV into the Service Mode.
- Press the **RED / GREEN** buttons to step up / down through the functions. Press the **YELLOW / BLUE** buttons to alter the function values.
- Press the STR button after each adjustment has been made to store the required values.

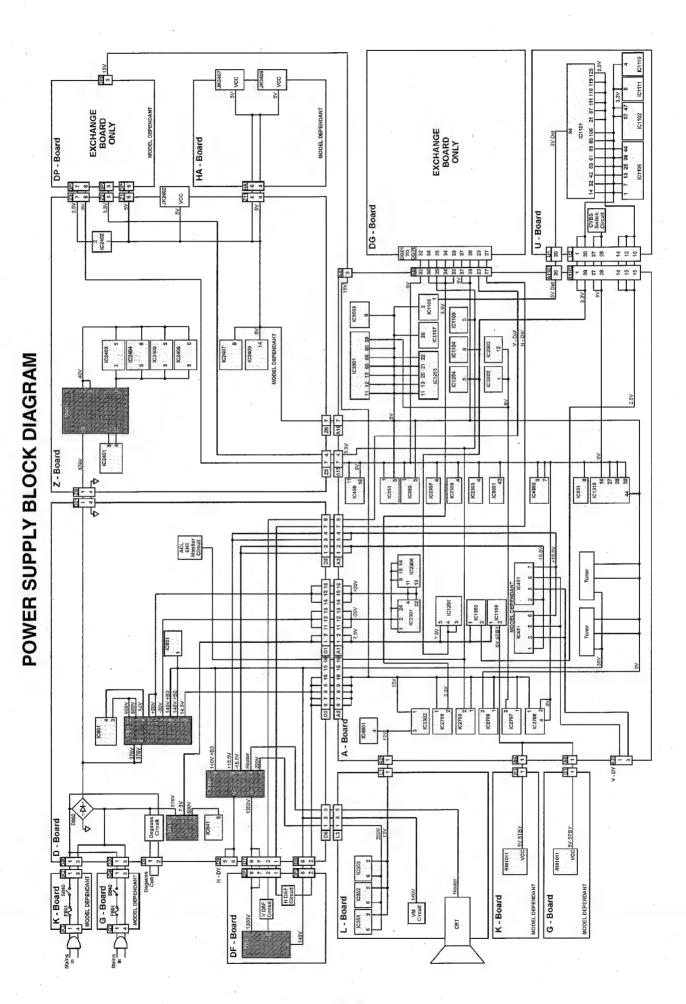

To exit the Service Mode, press the "N" button.

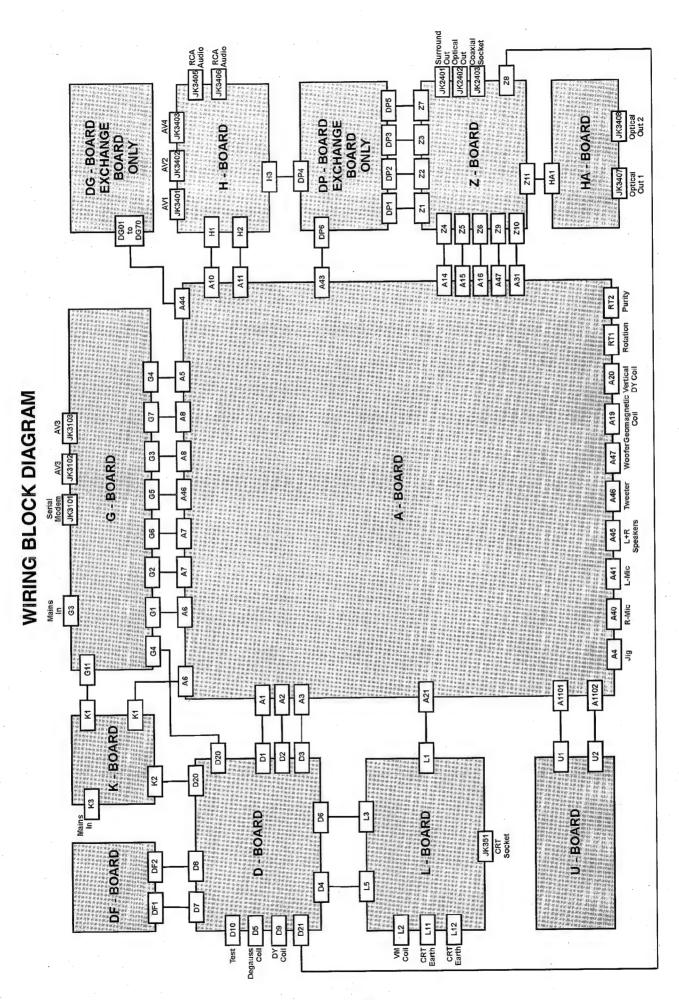

Alignment Function		Settings / Special features

SCHEMATIC DIAGRAMS FOR MODELS

TX-36/32PG50D TX-36/32PG50F TX-36/32PG50F/P

(EURO-7 CHASSIS)

IMPORTANT SAFETY NOTICE

Components identified by A mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

NOTE

1. RESISTOR

All resistors are carbon ¼W resistor, unless marked otherwise. Unit of resistance is OHM (Ω) (k=1,000, M=1,000,000)

All capacitors are ceramic 50V unless marked otherwise. Unit of capacitance is μF unless otherwise stated.

Unit of inductance is μH , unless otherwise stated.

TEST POINT

Test Point Position

5. EARTH SYMBOL

Chassis Earth (Cold) Line Earth (Hot)

VOLTAGE MEASUREMENT

Voltage is measured by a d.c. voltmeter. Measurement conditions are as follows:

Power source

a.c. 220V-240V, 50Hz

Receiving Signal

Colour Bar signal (RF)

All customer controls

Maximum position

7.

Indicates the Video signal path

Indicates the Audio signal path

These schematic diagrams are the latest at time of printing and are subject to change without notice.

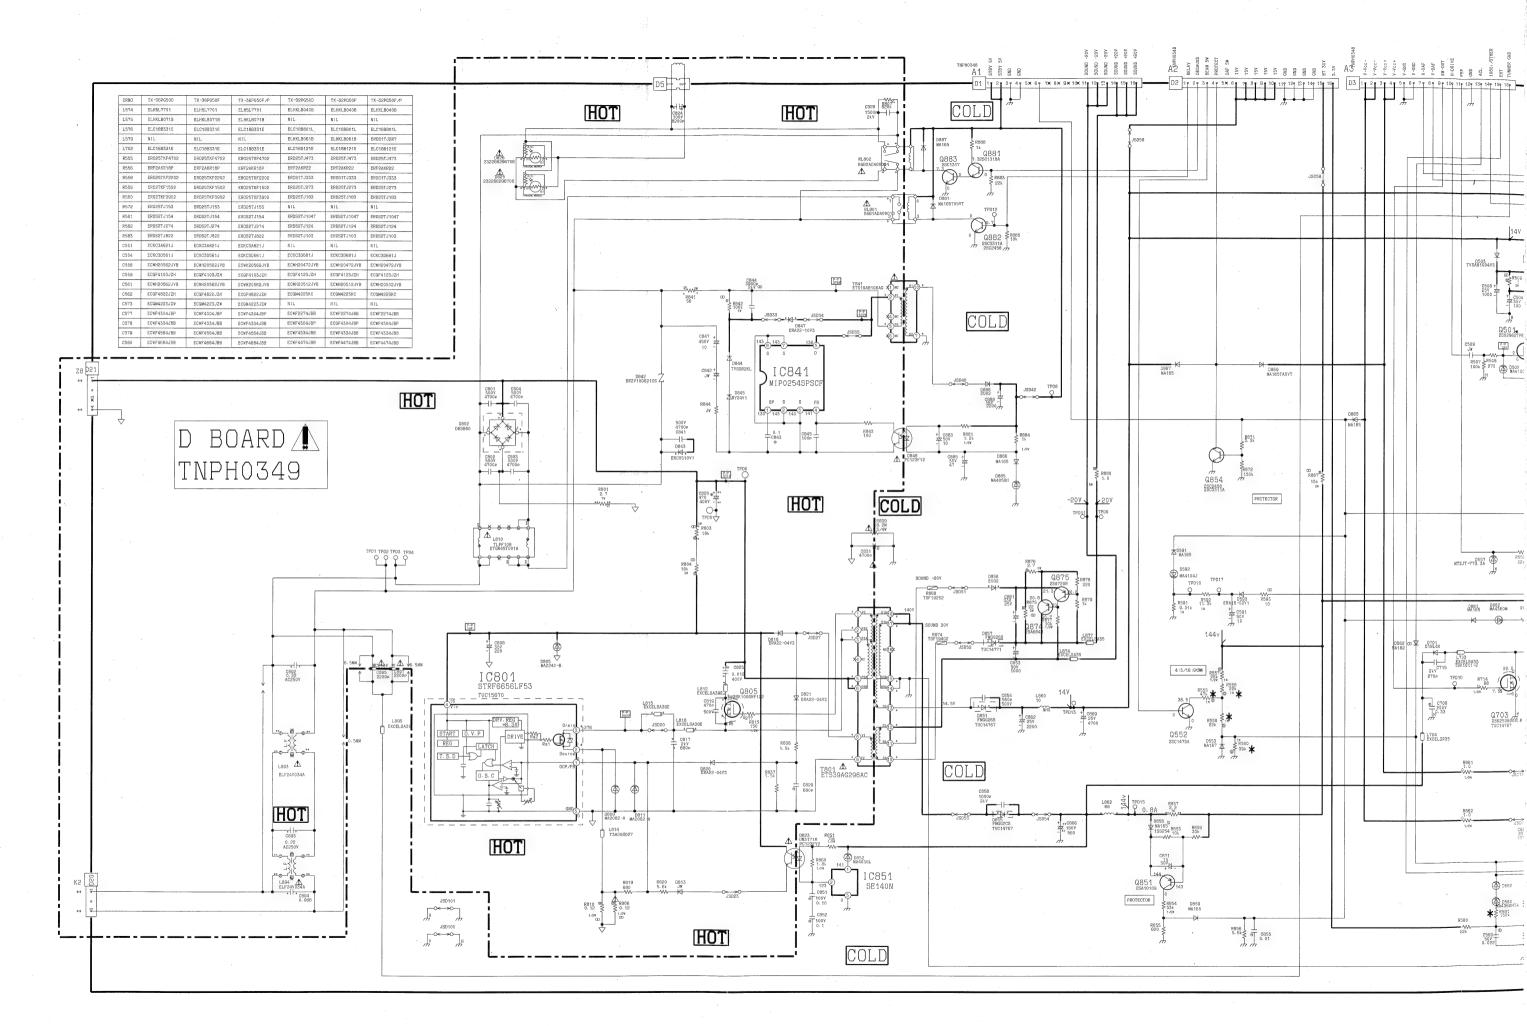

REMARKS

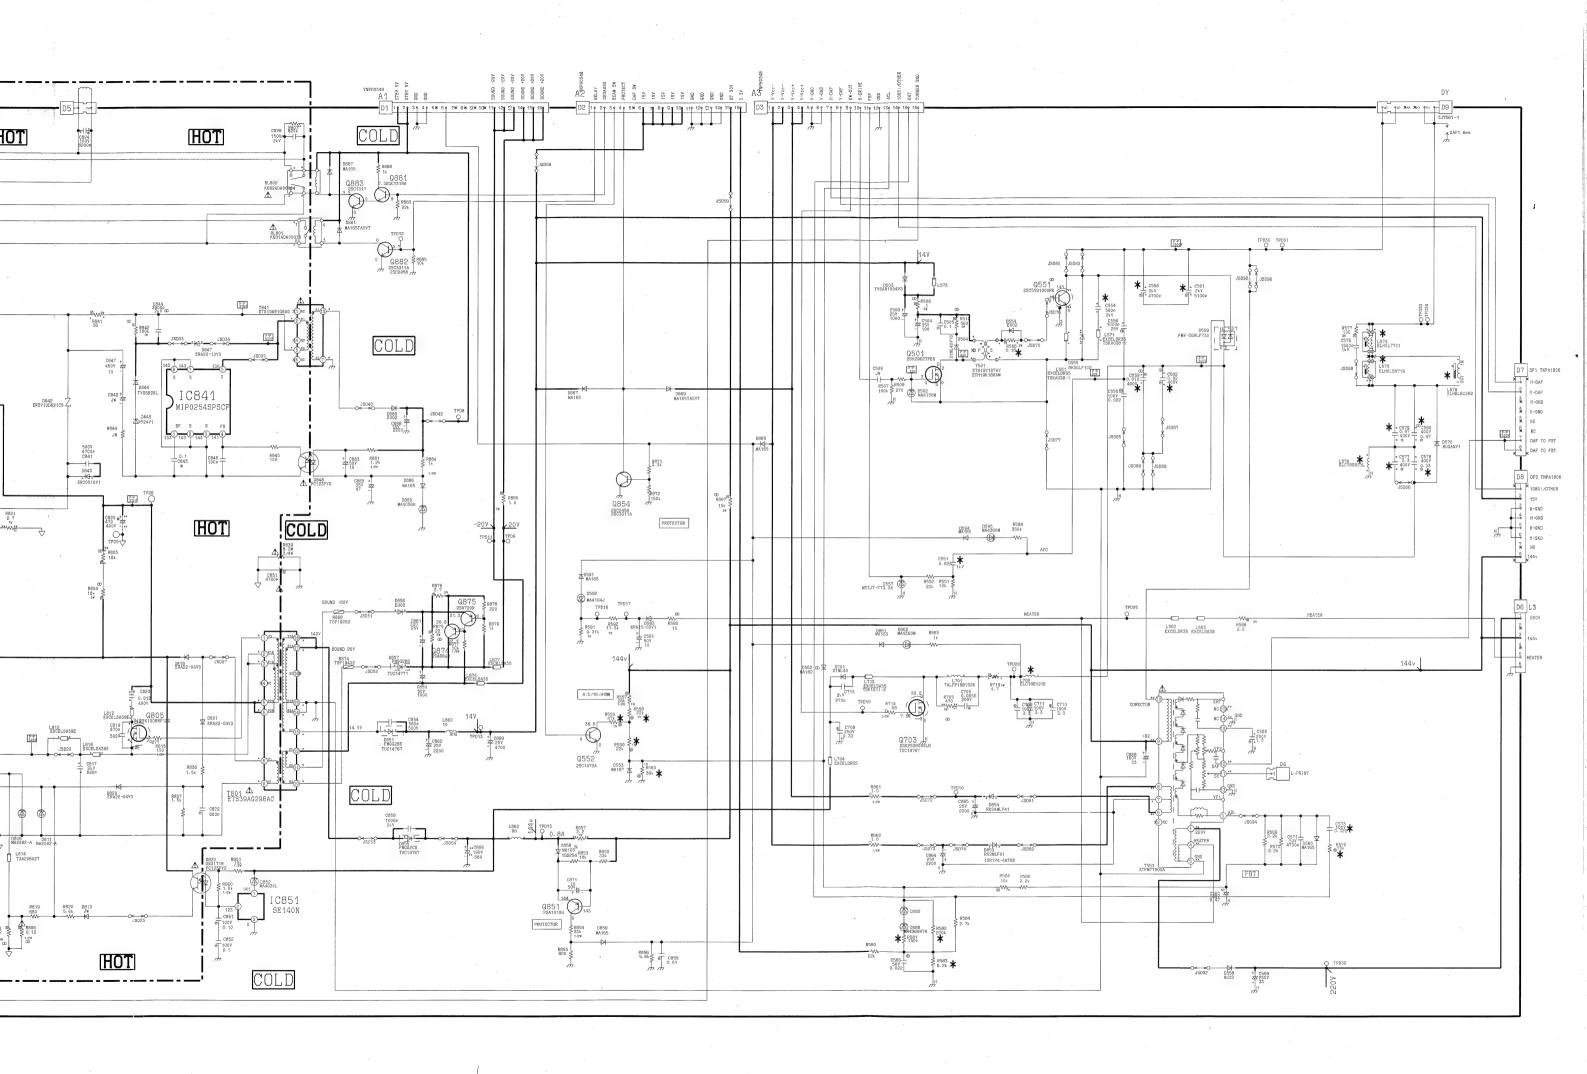

- Do not touch the hot part, or the hot and cold parts at the same time, as you are liable to a shock hazard.
- Do not short circuit the hot and cold circuits as electrical components may be damaged.
- Do not connect an instrument, such as an oscilloscope, to the hot and cold circuits simultaneously as this may cause fuse failure. Connect the earth of the instruments to the earth connection of the circuit being measured.

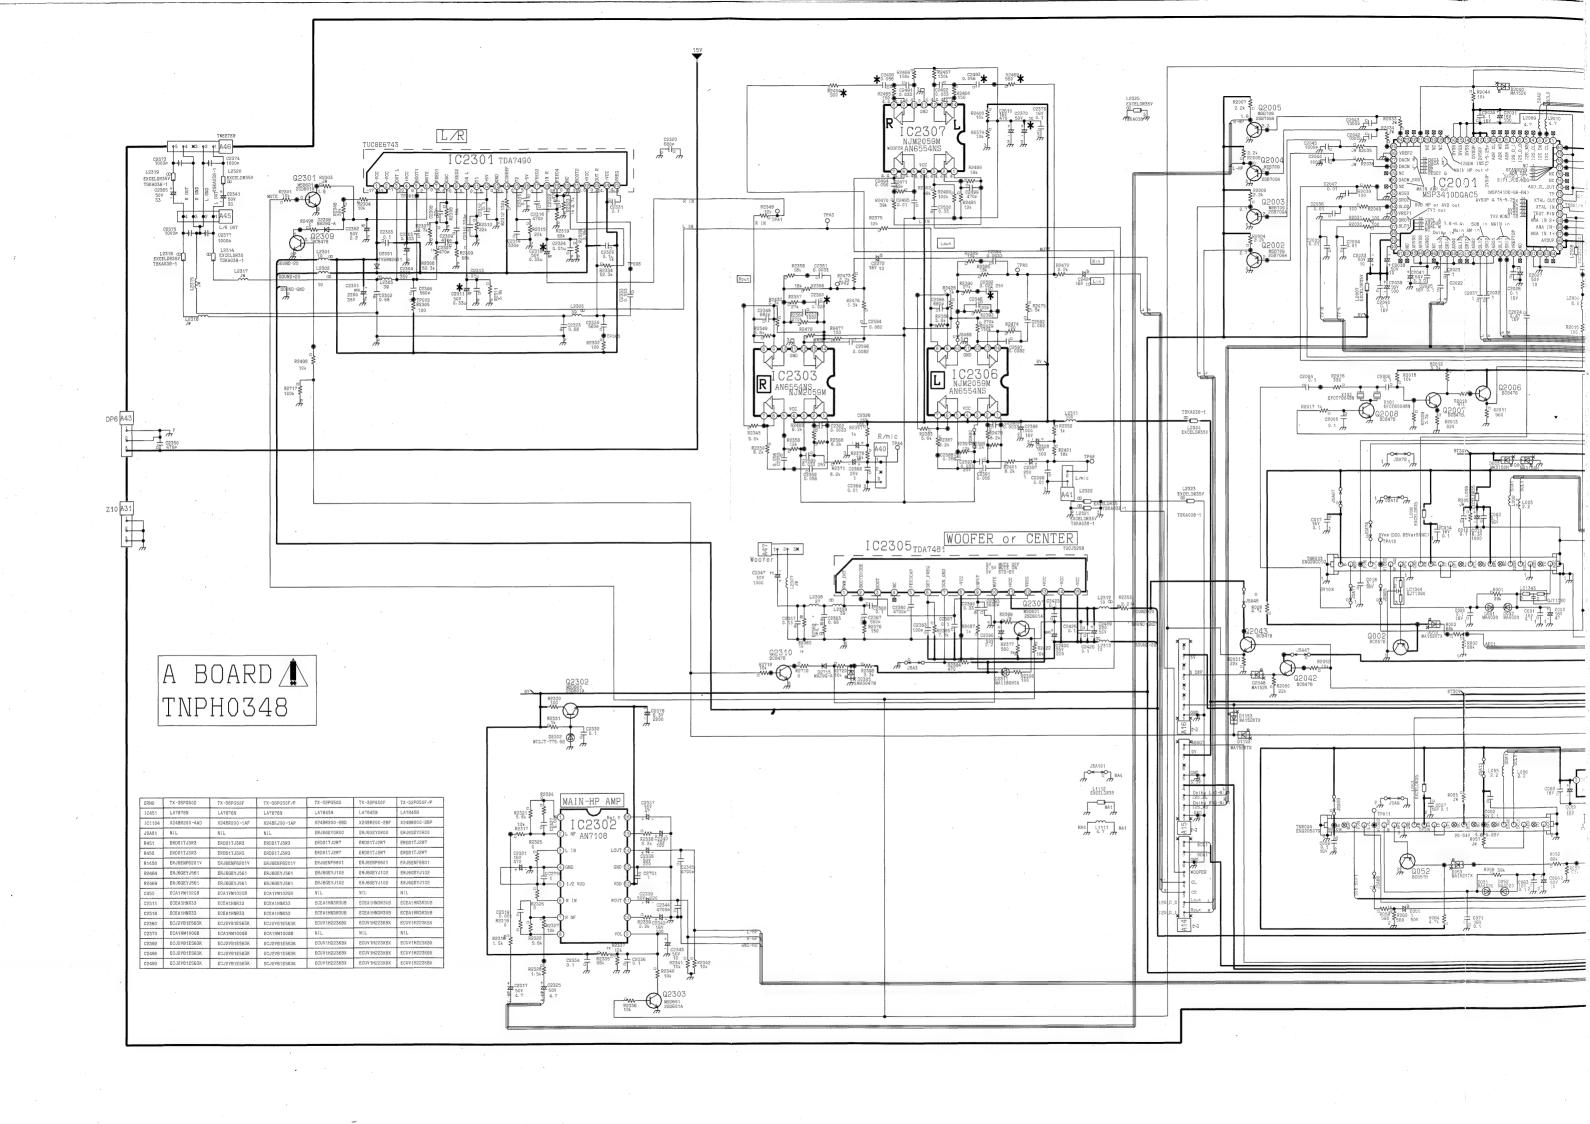

Make sure to disconnect the power plug before removing the chassis.

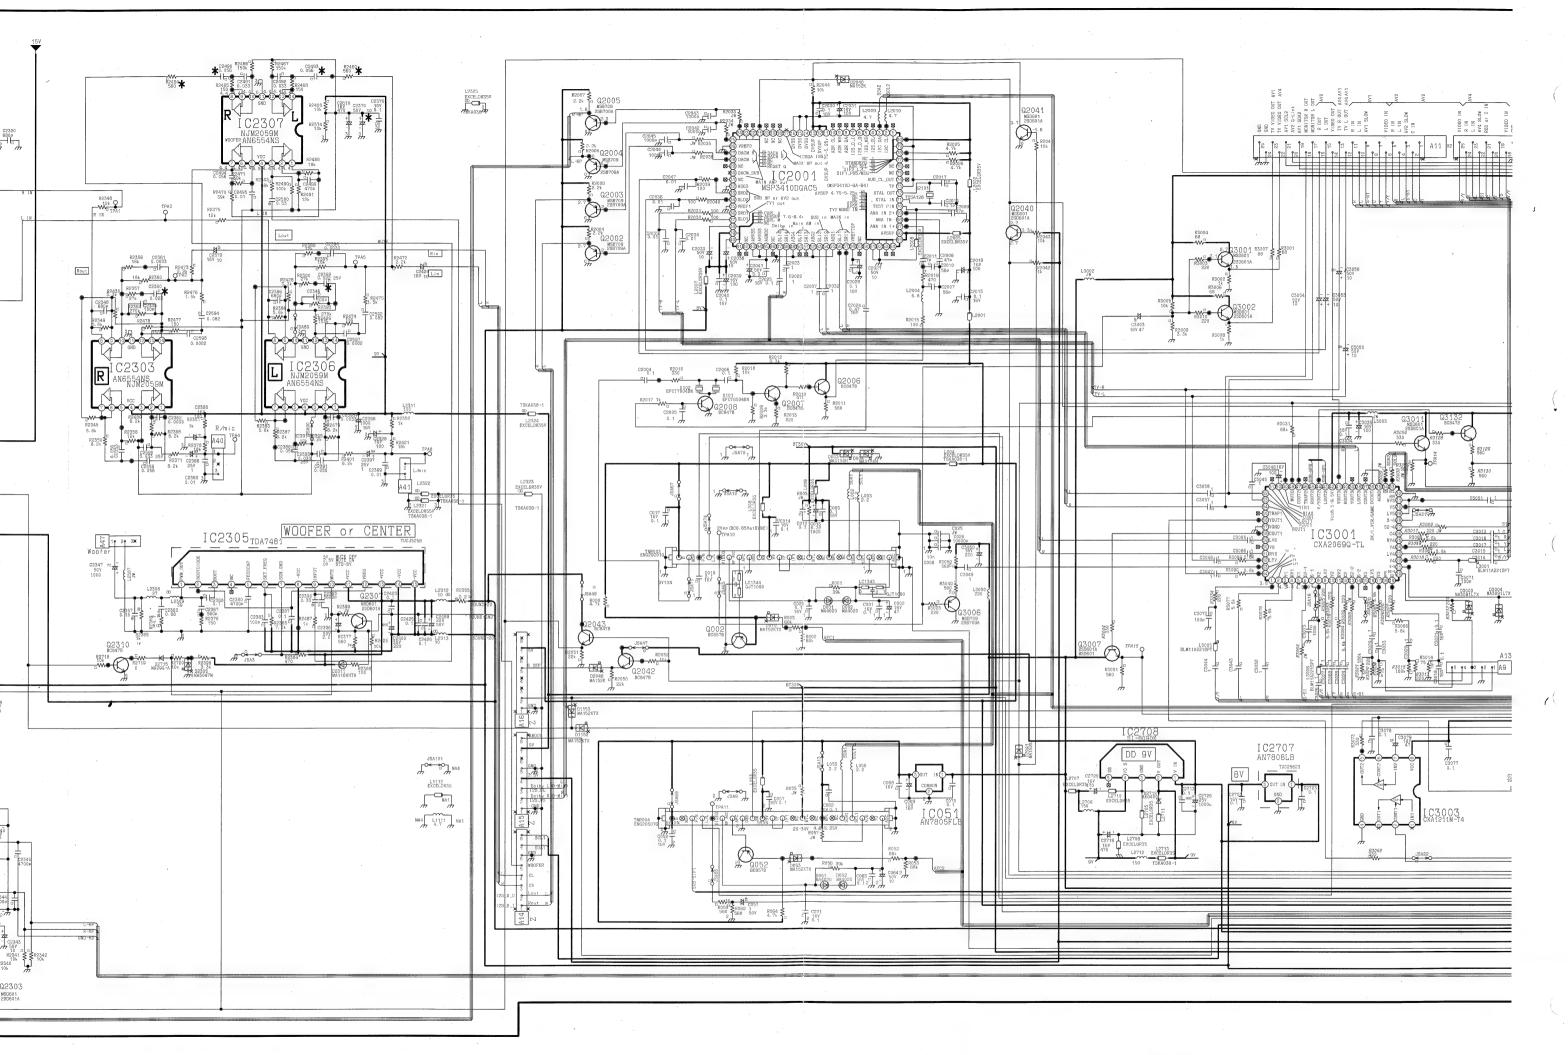

NOTE

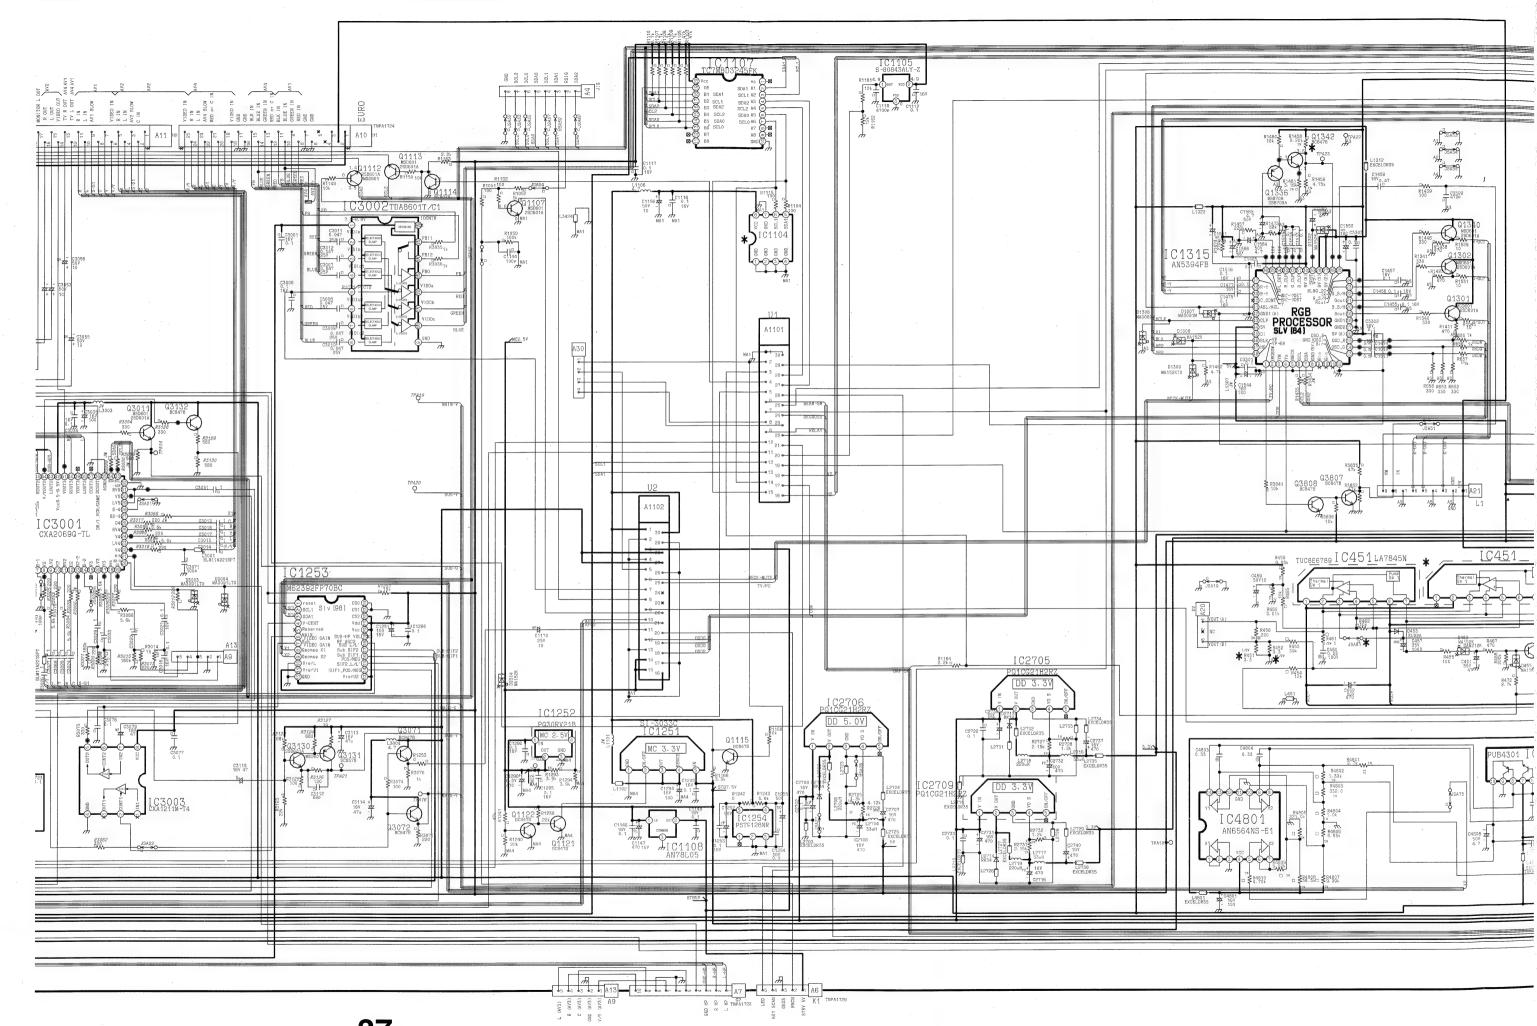

The Power Supply Circuit contains a circuit area, which uses a separate power supply to isolate the earth connection. The circuit is defined by HOT and COLD indications in the schematic diagram. All circuits, except the Power Circuit, are
